

117TH CONGRESS  
1ST SESSION

# H. R. 3426

To authorize the establishment of a Technology Partnership among democratic countries, and for other purposes.

---

## IN THE HOUSE OF REPRESENTATIVES

MAY 20, 2021

Mr. MOULTON (for himself, Mr. KEATING, and Mr. KINZINGER) introduced the following bill; which was referred to the Committee on Foreign Affairs

---

## A BILL

To authorize the establishment of a Technology Partnership among democratic countries, and for other purposes.

1       *Be it enacted by the Senate and House of Representa-*  
2       *tives of the United States of America in Congress assembled,*

**3 SECTION 1. SHORT TITLE.**

4       This Act may be cited as the “Democracy Technology  
5       Partnership Act”.

**6 SEC. 2. FINDINGS.**

7       Congress finds the following:

8           (1) The 21st century will increasingly be de-  
9       fined by economic competition rooted in techno-  
10      logical advances. Leaders in adopting emerging tech-

1 nologies, such as artificial intelligence, quantum  
2 computing, biotechnology, and next-generation tele-  
3 communications, and those who shape the use of  
4 such technologies, will garner economic, military,  
5 and political strength for decades.

6 (2) These technologies offer opportunities for  
7 the empowerment of citizens, but also challenges  
8 to basic norms of democratic governance and inter-  
9 nationally recognized human rights. The collection  
10 and analysis of data from individuals allows govern-  
11 ments to know more about their residents' behaviors,  
12 preferences, interests, and activities than was pos-  
13 sible years ago. The concentration of this data in  
14 key technologies, such as smart phones, search data-  
15 bases, and facial recognition databases, along with  
16 the sharing of data among governments, creates  
17 pressing concerns about individuals' scope to exer-  
18 cise their fundamental political and social rights.

19 (3) This challenge arises as the integrity and  
20 efficacy of post-World War II international institu-  
21 tions are increasingly challenged. New approaches to  
22 multilateral cooperation and arrangements are need-  
23 ed to tackle the challenges ahead to ensure that the  
24 United States continues to lead in critical tech-  
25 nologies.

1                             (4) As information and communications tech-  
2                             nologies have matured and increasingly mediate  
3                             large swathes of social, political and economic activ-  
4                             ity, it is incumbent on democratic governments to  
5                             address the ways in which these technologies have  
6                             undermined democratic values, consumer protec-  
7                             tions, and social cohesion. Moreover, as authori-  
8                             tarian regimes increasingly shape and deploy tech-  
9                             nologies to bolster repression, stifle free expression,  
10                             and interfere with free and fair elections in other  
11                             countries, the world's advanced democracies will  
12                             need to shape technology standards so that emerging  
13                             and critical technologies reflect democratic values,  
14                             including freedom of expression and privacy.

15                             (5) Technological leadership by the world's  
16                             major liberal-democratic nations collectively will be  
17                             essential to safeguarding democratic institutions,  
18                             norms, and values, and contributing to global peace  
19                             and prosperity, especially as authoritarian govern-  
20                             ments seek to promote closed information systems  
21                             and technology that is not interoperable, often  
22                             through trade and investment practices that are in-  
23                             compatible with global norms. A unified approach by  
24                             like-minded nations is needed to counteract growing

1 investments in, and deployments of, emerging tech-  
2 nologies by authoritarian powers.

3 (6) In addition to the development of emerging  
4 technologies, democratic nations must lead in shap-  
5 ing expectations for the responsible use of such tech-  
6 nologies and push back against laissez faire ap-  
7 proaches and authoritarian interests on internet gov-  
8 ernance advanced in multilateral forums by—

9 (A) advocating against efforts to crim-  
10 inalize or limit political dissent and freedom of  
11 speech online, such as those spearheaded by the  
12 Russian Federation, which seek to undermine  
13 the Council of Europe's Convention on  
14 Cybercrime, done at Budapest November 23,  
15 2001, in favor of a statist alternative; and

16 (B) prioritizing protections for elections,  
17 and other processes essential for healthy democ-  
18 racies, from cyber-attack.

19 (7) The world's leading democracies must also  
20 confront new challenges to their market-driven eco-  
21 nomic systems to ensure their continued leadership  
22 in technology and innovation. The People's Republic  
23 of China (referred to in this Act as the "PRC") is  
24 pursuing an industrial policy to achieve dominance  
25 in key technologies, including 5G, artificial intel-

1       ligence (referred to in this section as “AI”), quantum  
2       computing, hypersonics, biotechnology, space  
3       capabilities, and autonomous vehicles.

4               (8) The PRC seeks to use technological superiority  
5       for national security, military-civil fusion, and  
6       economic gains, according to its strategic plans, in-  
7       cluding—

8                       (A) the Made in China 2025 strategy;  
9                       (B) the Five-Year Plan for Standardiza-  
10       tion and China Standards 2035;

11                       (C) the 2006 Medium-to-Long Term S&T  
12       Plan;

13                       (D) the 2010 State Council Decision on  
14       Accelerating the Development of Strategic  
15       Emerging Industries; and

16                       (E) the 13th Five-Year Plan for the Develop-  
17       ment of Strategic Emerging Industries.

18               (9) The PRC seeks to advance in areas in  
19       which democratic countries currently have a technolog-  
20       ical advantage and move ahead in emerging tech-  
21       nologies where China seeks a unique opportunity to  
22       overtake such countries.

23               (10) For many years, the PRC has pursued in-  
24       dustrial policies and discriminatory trade practices  
25       that include—

- 1                             (A) heavily subsidizing Chinese companies,  
2                             restricting foreign competition, conducting  
3                             forced technology transfers, and using both licit  
4                             and illicit means to access research and devel-  
5                             opment around technologies in order to advan-  
6                             tage Chinese companies in specific technology  
7                             fields;
- 8                             (B) providing significant government fund-  
9                             ing for research and development in the PRC in  
10                            specific technologies to build future competitive-  
11                             ness;
- 12                            (C) seeking to ensure global adoption of  
13                             Chinese technologies, and the success of Chi-  
14                             nese firms, especially in emerging and strategic  
15                             markets, through significant foreign direct in-  
16                             vestment, low-cost financing and comprehensive  
17                             services for foreign development projects,  
18                             through initiatives such as the Belt and Road  
19                             Initiative, which includes the Digital Silk Road  
20                             and the Health Silk Road, as well as the Smart  
21                             City Initiative, efforts centered on promoting  
22                             the use of Chinese exports by offering far  
23                             cheaper rates and bundling these deals into  
24                             larger development and aid packages;

1                             (D) aiding the adoption of Chinese-led  
2                             standards for digital technologies and products  
3                             through compensating Chinese firms that sub-  
4                             mit standards and flooding forums with tech-  
5                             nical experts; and

6                             (E) leveraging the international standard  
7                             setting bodies to advance the vision of the PRC  
8                             regarding standards and technologies.

9                             (11) As a result of these practices in support of  
10                            Chinese companies, the PRC is increasing its influ-  
11                            ence in AI, 5G, and a wide range of other science  
12                            and technology disciplines that constitute long-term  
13                            economic and security threats to the United States,  
14                            its allies, and like-minded partners. According to  
15                            market research firm Dell’Oro Group, Huawei’s  
16                            share of worldwide telecommunications revenue  
17                            equipment grew from 20 percent in 2014 to 31 per-  
18                            cent in 2020.

19                             (12) While the United States semiconductor in-  
20                             dustry is the worldwide industry leader with approxi-  
21                             mately 50 percent of global market share and sales  
22                             of \$193,000,000,000 in 2019, the situation may be  
23                             changing. In 2019, all 6 of the new semiconductor  
24                             fabrication plants that opened worldwide were lo-  
25                             cated outside of the United States, with 4 of these

1       plants built in China. The Government of the PRC  
2       plans to spend \$150,000,000,000 on its computer  
3       chip industry during the next 10 years.

4                 (13) The PRC uses technologies, such as AI,  
5       facial recognition, and biometrics, to increase control  
6       over its population, facilitating mass surveillance,  
7       scalable censorship, and technology-enabled social  
8       control, including against ethnic and religious mi-  
9       norities including Tibetans, Uyghurs, ethnic  
10      Kazakhs, Kyrgyz, and members of other Muslim mi-  
11      nority groups.

12                 (14) The PRC uses its economic power to co-  
13       erce and censor companies, individuals and coun-  
14       tries.

15                 (15) In the past decade, the Government of the  
16       PRC—

17                         (A) blocked exports of rare earth elements  
18       to Japan;

19                         (B) threatened to curtail domestic sales of  
20       German cars;

21                         (C) cut off tourism to South Korea;

22                         (D) restricted banana imports from the  
23       Philippines; and

24                         (E) imposed large tariffs on Australian  
25       barley exports.

- 1                     (16) The Government of the PRC—  
2                         (A) has banned United States technology  
3                         companies, including Facebook, Google, and  
4                         Twitter;  
5                         (B) has pressured movie studios based in  
6                         the United States to alter content in movies  
7                         that it deemed objectionable; and  
8                         (C) has retaliated against a range of  
9                         American companies for actual or perceived  
10                         support for a range of political positions, in-  
11                         cluding recognizing territorial claims of coun-  
12                         tries in border disputes with China, recognizing  
13                         Tibet, and more.  
14                     (17) Third countries have become particular  
15                         targets of Chinese investments in technology. These  
16                         third country investments provide access to innova-  
17                         tion, data that allows Chinese companies to refine  
18                         their own systems, and influence over the policies of  
19                         these governments. The terms on which Chinese in-  
20                         vestments are made often are attractive in the short-  
21                         term but create conditions for Chinese ownership of,  
22                         or influence over, major industries in those coun-  
23                         tries.  
24                     (18) After decades of being the world leader in  
25                         key technologies, the United States is at risk of fall-

1       ing behind the PRC in key technologies of the fu-  
2       ture. While private-sector research and development  
3       investments have steadily increased in the United  
4       States, Federal Government spending has declined  
5       as a percentage of Gross Domestic Product from ap-  
6       proximately 1.2 percent in 1976 to approximately  
7       0.7 percent in 2018. The decline has been even  
8       steeper in the physical sciences. The Federal Gov-  
9       ernment plays a unique and critical role in Amer-  
10      ica's innovation ecosystem. Government research and  
11      development spending spurs private-sector invest-  
12      ments, and the United States Government remains  
13      the largest source of basic research funding, which  
14      is foundational to game-changing technological  
15      achievements.

16                     (19) During the past several years, the PRC  
17       has quadrupled its research and development spend-  
18       ing and is on the brink of surpassing the United  
19       States in total investments in key technologies, with  
20       its growth in research and development spending  
21       doubling the United States Government's spending  
22       increase in this area. Chinese patent publications  
23       have surged in the fields of artificial intelligence,  
24       machine learning, and deep learning.

1                         (20) The United States is highly dependent on  
2                         China for key components of critical technologies in  
3                         its supply chains, such as rare earths.

4                         (21) The United States remains a leader in the  
5                         science and technology areas of engineering and biol-  
6                         ogy as well as key components, including tele-  
7                         communications equipment and semiconductors. The  
8                         United States does not have a domestic manufac-  
9                         turer of radio access network equipment for 5G net-  
10                         works, but is well-positioned to lead in 6G tele-  
11                         communications, which depend on software and  
12                         semiconductors, areas of United States strength.

13                         (22) Other countries have unique knowledge,  
14                         expertise, and capabilities in numerous cutting edge  
15                         technologies, including semiconductor manufacturing  
16                         equipment, such as extreme ultraviolet lithography  
17                         machines for semiconductor fabrication and machine  
18                         tools for fabrication of custom components. In order  
19                         to successfully compete against the PRC, the United  
20                         States must partner with such countries.

21                         (23) The private sector in the United States  
22                         and partner countries, including Japan, Korea, Aus-  
23                         tralia, New Zealand, the United Kingdom, and the  
24                         European Union has considerable expertise in both  
25                         technology and in standard setting, given the role of

1       the private sector in international standard setting  
2       bodies, but this expertise can be better leveraged in  
3       shaping United States technology policy.

4 **SEC. 3. SENSE OF CONGRESS.**

5       It is the sense of Congress that—

6                 (1) emerging technology governance regimes  
7       driven by undemocratic governments that do not re-  
8       flect democratic values are gaining traction inter-  
9       nationally through coercive, diplomatic, and unfair  
10      economic, trade, and development practices;

11                 (2) the United States is failing to lead inter-  
12       national efforts or prioritize multilateral coordina-  
13       tion, institutions, and legal compatibility in the area  
14       of technology governance, ceding leadership to au-  
15       thoritarian regimes and risking the growth of anti-  
16       democratic norms and standards around tech-  
17       nologies; and

18                 (3) promoting greater coordination, common  
19       functional problem-solving institutional mechanisms,  
20       and more compatible legal regimes among demo-  
21       cratic nations is essential to create an international  
22       technology governance architecture that benefits all  
23       nations and effectively counters and contains non-  
24       democratic governance regimes.

1   **SEC. 4. STATEMENT OF POLICY.**

2       It shall be the policy of the United States to lead in  
3   the creation of a new multilateral diplomatic architecture  
4   for technology policy composed of the world's tech-leading  
5   democracies.

6   **SEC. 5. INTERNATIONAL TECHNOLOGY PARTNERSHIP OF-**

7                   **FICE AT THE DEPARTMENT OF STATE.**

8       (a) **ESTABLISHMENT.**—The Secretary of State shall  
9   establish an interagency-staffed International Technology  
10   Partnership Office (referred to in this section as the “Of-  
11   fice”), which shall be housed in the Department of State.

12       (b) **LEADERSHIP.**—

13                   (1) **SPECIAL AMBASSADOR.**—The Office shall be  
14   headed by the Special Ambassador for Technology,  
15   who shall—

16                   (A) be appointed by the President, by and  
17   with the advice and consent of the Senate;

18                   (B) have the rank and status of ambas-  
19   sador; and

20                   (C) report to the Secretary of State, unless  
21   otherwise directed by the Secretary of State.

22                   (2) **DIRECTORS.**—The Secretary of Commerce  
23   and the Secretary of Treasury shall each appoint,  
24   from within their respective departments, directors  
25   for International Technology Partnership, who also  
26   shall serve as liaisons between the Office and the

1       Department of Commerce or the Department of the  
2       Treasury, as applicable.

3           (c) MEMBERSHIP.—In addition to the individuals re-  
4       ferred to in subsection (b), the Office shall include a rep-  
5       resentative or expert detailee from key Federal agencies,  
6       as determined by the Special Ambassador for Technology.

7           (d) PURPOSES.—The purposes of the Office shall in-  
8       clude—

9                  (1) creating an international technology part-  
10       nership of democratic countries to develop har-  
11       monized technology governance regimes and to fill  
12       gaps where United States capabilities are currently  
13       insufficient, with a specific focus on key tech-  
14       nologies, including—

15                      (A) artificial intelligence and machine  
16       learning;

17                      (B) 5G telecommunications and other ad-  
18       vanced wireless networking technologies;

19                      (C) semiconductor chip manufacturing;

20                      (D) biotechnology;

21                      (E) quantum computing;

22                      (F) surveillance technologies, including fa-  
23       cial recognition technologies and censorship  
24       software; and

25                      (G) fiber optic cables;

1                         (2) vigorously identifying existing and, as need-  
2                         ed, new multilateral mechanisms to advance the ob-  
3                         jectives of the International Technology Partnership  
4                         around technology governance that advances demo-  
5                         cratic values;

6                         (3) coordinating with such countries regarding  
7                         shared technology strategies, including technology  
8                         controls and standards, as informed by the reports  
9                         required under section 8; and

10                         (4) developing strategies with partner countries  
11                         for coordinated, development and financial support  
12                         for the acquisition by key countries of the tech-  
13                         nologies listed in paragraph (1), or comparable tech-  
14                         nologies, in order to provide alternatives for those  
15                         countries to systems supported by authoritarian re-  
16                         gimes.

17                         (e) SPECIAL HIRING AUTHORITIES.—The Secretary  
18                         of State may—

19                         (1) hire support staff for the Office; and  
20                         (2) hire individuals to serve as experts or con-  
21                         sultants for the Office, in accordance with section  
22                         3109 of title 5, United States Code.

23                         (f) REPORT.—Not later than one year after the date  
24                         of the enactment of this Act and annually thereafter for  
25                         the following three years, the Secretary of State shall sub-

1 mit to the Committee on Foreign Relations of the Senate  
2 and the Committee on Foreign Affairs of the House of  
3 Representatives an unclassified report, with a classified  
4 index if necessary, regarding the activities of the Office  
5 undertaken to carry out the purposes described in sub-  
6 section (d), including information on any cooperative ac-  
7 tivities, initiatives, or partnerships pursued with United  
8 States allies and partners, and the results of such activi-  
9 ties, initiatives, or partnerships.

10 **SEC. 6. INTERNATIONAL TECHNOLOGY PARTNERSHIP.**

11 (a) PARTNERSHIP CRITERIA.—The Special Ambas-  
12 sador for Technology (referred to in this section as the  
13 “Special Ambassador”) shall seek to establish an Inter-  
14 national Technology Partnership with foreign countries  
15 that have—

16 (1) democratic national government and a  
17 strong commitment to democratic values, including  
18 an adherence to the rule of law, freedom of speech,  
19 and respect for and promotion of human rights, in-  
20 cluding the right to privacy;

21 (2) an economy with advanced technology sec-  
22 tors; and

23 (3) a demonstrated record of trust or an ex-  
24 pressed interest in international cooperation and co-

1 ordination with the United States on important de-  
2 fense and intelligence issues.

3 (b) POLITICAL AND ECONOMIC UNIONS.—The Inter-  
4 national Technology Partnership may include relevant po-  
5 litical and economic unions.

6 (c) OBJECTIVES.—The Special Ambassador, in co-  
7 operation with International Technology Partnership par-  
8 ticipants, shall pursue, as appropriate, through memo-  
9 randa of understanding, executive agreements, free trade  
10 agreements, and existing multilateral channels—

11 (1) coordination of technology policies and  
12 standards among International Technology Partner-  
13 ship countries through participation in international  
14 standard setting bodies, such as the United Nations  
15 Group of Governmental Experts, World Trade Orga-  
16 nization, the 3rd Generation Partnership Project,  
17 and the International Telecommunications Union,  
18 including pre-attendance meetings, education, and  
19 panels to report on issues;

20 (2) coordination of policies with the private sec-  
21 tor to ensure private sector led, politically neutral,  
22 standards processes;

23 (3) the adoption of shared data privacy, data  
24 sharing, and data archiving standards among the  
25 United States and partner countries and relevant

1 economic and political unions, including harmonized  
2 data protection regulations;

3 (4) the creation of coordinated policies for the  
4 use and control of emerging and foundational tech-  
5 nologies through—

6 (A) use restrictions and export controls;

7 (B) investment screening coordination, in-  
8 cluding the harmonization of technology-trans-  
9 fer laws, regulations, policies, and practices;

10 and

11 (C) the development of other arrangements  
12 to regulate and control technology transfer;

13 (5) coordination around the resiliency of supply  
14 chains in critical technology areas, with possible di-  
15 versification of supply chain components among the  
16 group, while—

17 (A) abiding by transparency obligations re-  
18 lated to subsidies and product origin;

19 (B) conducting risk analyses of products  
20 manufactured in third party nations that fail to  
21 meet established standards similarly; and

22 (C) coordinating subsidy policies;

23 (6) the coordination of supply chains regarding  
24 semiconductor fabrication through a fabrication re-  
25 search consortium for the semiconductor industry;

- 1                         (7) the facilitation of partnerships and coopera-  
2                         tion between research universities, private-sector  
3                         stake holders, and other entities in member coun-  
4                         tries regarding key technologies, including the cre-  
5                         ation of memoranda of understanding regarding  
6                         science and technology collaboration with member  
7                         countries and coordinated incentives and subsidies;
- 8                         (8) the coordination of investments and co-fi-  
9                         nancing in targeted countries with the goal of—  
10                         (A) promoting secure and resilient digital  
11                         infrastructure and privacy-enhancing tech-  
12                         nologies that protect democratic values and cre-  
13                         ate a clear contrast and alternative to the PRC  
14                         through the United States International Devel-  
15                         opment Finance Corporation, the Export-Im-  
16                         port Bank of the United States, foreign devel-  
17                         opment finance institutions (including the  
18                         World Bank and the International Monetary  
19                         Fund), the European Bank for Reconstruction  
20                         and Development, the European Investment  
21                         Bank, partner country development institutions,  
22                         regional banks, other lending institutions, or  
23                         new investment mechanisms; and  
24                         (B) seeking to ensure that all funding pro-  
25                         vided by those institutions, for any purpose,

1       should be conditioned upon the protection of  
2       democratic values, and that financing is forbid-  
3       den to entities involved in the international in-  
4       vestment programs of authoritarian or illiberal  
5       governments; and

6                 (9) information sharing among partner coun-  
7       tries to raise awareness of—

8                         (A) the technology transfer threat posed by  
9       authoritarian governments; and

10                         (B) ways in which autocratic regimes are  
11       utilizing technology to erode democracies.

12       (d) WORKING GROUPS.—In carrying out the objec-  
13       tives described in subsection (c) with respect to particular  
14       technology areas, the Special Ambassador may establish  
15       working groups within the International Technology Part-  
16       nership, composed of representatives from partner coun-  
17       tries, including relevant political and economic unions, to  
18       coordinate on discrete strategies and policies related to  
19       specific technologies.

20 **SEC. 7. INTERNATIONAL TECHNOLOGY PARTNERSHIP  
21 FUND.**

22       (a) ESTABLISHMENT.—There is established in the  
23       Treasury of the United States a trust fund, which shall  
24       be known as the “International Technology Partnership  
25       Fund” (referred to in this section as the “Fund”).

1                   (b) DEPOSITS.—

2                   (1) FEDERAL APPROPRIATIONS.—There is au-  
3                   thorized to be appropriated \$5,000,000,000 for the  
4                   Fund.

5                   (2) DONATIONS.—In addition to amounts au-  
6                   thorized to be appropriated for the Fund pursuant  
7                   to paragraph (1), the Secretary of the Treasury may  
8                   accept donations from International Technology  
9                   Partnership member countries.

10                  (c) USE OF FUNDS.—Subject to subsection (d),  
11                  amounts deposited into the Fund may be used by the Sec-  
12                  retary of State, in consultation with the International  
13                  Technology Partnership and other relevant Federal agen-  
14                  cies, to support—

15                  (1) joint research projects between government  
16                  research agencies, universities, technology compa-  
17                  nies, and other entities from International Tech-  
18                  nology Partnership member countries; and

19                  (2) technology investments in third country  
20                  markets.

21                  (d) NOTIFICATION REQUIREMENT.—The obligation  
22                  of funds under subsection (c) is subject to the notification  
23                  requirement set forth in section 634A of the Foreign As-  
24                  sistance Act of 1961 (22 U.S.C. 2394–1).

25                  (e) PUBLIC-PRIVATE BOARD.—

1                             (1) ESTABLISHMENT.—There is established an  
2                             International Technology Partnership Advisory  
3                             Board (referred to in this subsection as the  
4                             “Board”), which shall provide the International  
5                             Technology Partnership Office with advice and rec-  
6                             ommendations concerning the implementation of this  
7                             Act.

8                             (2) MEMBERSHIP.—The Board shall be com-  
9                             posed of individuals—

10                             (A) with demonstrated expertise in the  
11                             fields of emerging technologies and inter-  
12                             national trade; and

13                             (B) from the private sector, academic insti-  
14                             tutions, national or international human rights  
15                             organizations, or technology research institu-  
16                             tions.

17                             **SEC. 8. DEPARTMENT OF STATE REPORTING REGARDING**  
18                                     **NATIONAL STRATEGY FOR TECHNOLOGY AND**  
19                                     **NATIONAL SECURITY.**

20                             Not later than one year after the date of the enact-  
21                             ment of this Act, the Secretary of State, in consultation  
22                             with other relevant Federal agencies, shall submit to the  
23                             Committee on Foreign Relations of the Senate and the  
24                             Committee on Foreign Affairs of the House of Representa-  
25                             tives an unclassified report, with a classified index if nec-

1     essary, that outlines a national strategy for technology and  
2     national security, which—  
3                 (1) assesses the emerging and foundational  
4                 technologies of the future;  
5                 (2) identifies the current capabilities of the  
6                 United States in critical technologies and its compo-  
7                 nents, including any gaps in such capabilities;  
8                 (3) identifies the technology capabilities (hori-  
9                 zon scanning and technology forecasting) among al-  
10                 lied and partner countries;  
11                 (4) identifies governance models for emerging  
12                 and foundational technologies being adopted by  
13                 other countries and other areas of global policy con-  
14                 vergence with respect to which the United States  
15                 should better pursue multilateralism or coordination;  
16                 (5) identifies a preliminary set of priority tech-  
17                 nology areas on which the International Technology  
18                 Partnership should be focused;  
19                 (6) analyzes the current capabilities of the PRC  
20                 in critical technologies and components, including  
21                 any gaps in such capabilities; and  
22                 (7) includes a set of recommendations for—  
23                         (A) rapidly enhancing United States tech-  
24                         nological capabilities;

1                   (B) how the United States should collaborate with allied or like-minded countries, identifying existing and, as needed, new multilateral mechanisms to fill capability gaps and areas for the United States to advance democratic values; and

7                   (C) the criteria for determining which countries should be included in the International Technology Partnership, including a strong commitment to democratic values and a history of working closely with the United States, as reflected in Department of State reports regarding human rights and media freedom.
